

VP Project Development

Job Description

Job Title: VP Of Project Development & Delivery

Location: London

Salary: Competitive salary with outstanding bonus scheme & lucrative stock options

During a time of considerable uncertainty, it's refreshing and heartening to see that some companies are still in a position to kick on with their own growth plans and make strategic hires to take their businesses forward.

NES are proud to be representing one such company, having recently been engaged to deliver a number of strategic hires, for a rapidly growing technology driven business, who have secured significant investment from a consortium of investors that count some of the most globally identifiable names in industry.

This innovative business have developed a process technology and a variety of solvents, for use in Carbon Capture and Recovery, which can be applied in a number of industry sectors, not just within traditional renewable sectors, but within heavy process industry, providing their customers with novel, low cost, and energy efficient solutions for carbon dioxide separation.

Currently, their technology is being utilized by over 30 customers globally and with a significant pipeline of current and future projects, they are now looking to identify a **VP Of Project Delivery**

The **VP Of Project Delivery**, will take an overall lead for the companies project portfolio, to ensure smooth project delivery and customer satisfaction, while setting and implementing project standards and processes, to support the future growth and success of the business.

As such, you will be a vastly experienced operations leader, with a proven track record of developing and commissioning industrial capital projects, with a customer focus and the ability to lead and coordinate a number of external subcontractors, vendors and stakeholders, on a global scale.

Here, you will have the opportunity to use your industry experience and business acumen to play a pivotal role in the long-term growth and success of this exciting business, while seeing the output of your endeavors.

In turn, with a lucrative bonus scheme and equity in the business available, you will be rewarded for helping shape the future success of a business, whose technology is helping to address the significant challenge of reducing global carbon emissions in industry.

Requirements:

Degree in relevant Engineering discipline

- Proven track record of managing projects from start to finish in the EU/US market
- Track-record of creating & implementing project standards and processes
- Ability to build and shape teams for future success
- Adept at leading diverse project teams in multiple regions with minimal supervision

Desirables:

- Knowledge of separation technologies used in gasification, carbon capture, gas processing or industrial gas processes.
