

Position Title:	Engineering Director
Company:	Carbon Clean Solutions Limited (CCSL)
Reports To:	Chief Technology Officer (Based in London)
Location:	London
Income Range:	Competitive
Benefits:	Medical and pension
Bonus:	Potential for cash and or stock incentive bonus
Travel:	~30% (EU/USA/IN)

Company Description:

Carbon Clean Solutions (CCS) is an innovation leader in carbon dioxide (CO₂) separation technology for industrial and gas treating applications. Our step-change technology significantly reduces the costs and environmental impacts over existing CO₂ separation techniques. With 39 operating plants using CCSL's patented technology and one large scale carbon capture and utilisation plant operating in India, we aim to get to \$50 million in sales in 5 years. Having closed an investment of \$16 million from investors like WAVE Equity Partners, Chevron Technology Ventures and Marubeni Corporation, we are all set to grow exponentially and build an amazing team. More about us: www.carboncleansolutions.com

Position Description:

The engineering director will be responsible for managing all engineering projects across company. The responsibilities will include:

- Development and implementation of engineering procedures and work practices.
- Growth and development (clientele, capabilities, strength) of engineering team.
- Devise ways to improve productivity and quality of engineering services and products.
- Leading, managing global technical teams, assigning roles and establishing work schedules and monitoring the progress of engineering projects.
- Training new team members and providing technical expertise to teams.
- Creating and monitoring budgets for engineering projects.
- Designing a companywide process to optimize the use of resources and increase profit.
- Overseeing the execution of a project from initial brainstorming session to finished product.

Requirements:

- Bachelor's degree within the engineering field (preferably chemical, chemistry and mechanical) and Master's degree in business administration.
- Extensive experience within an engineering role, with demonstrable experience in a management / leadership role.
- High technical fluency with ability to communicate effectively both verbally and written.
- Knowledge of gas separation technologies used in gas processing, gasification, carbon capture, or industrial gas processes.
- Hands-on experience with start-ups and troubleshooting of industrial plants.
- Comfort in working directly with operations, engineering, and project management functions at both owner-operators and engineering companies.
- Ability to work effectively in a small, developing, and entrepreneurial organization; high level of flexibility and adaptability required.
- Strong relationship building skills, especially building relationships remotely.
- Fluency in English and other languages (i.e. German, Spanish, Dutch) a plus.

Why Carbon Clean Solutions (CCSL)?

CCSL is a small and growing company with a commitment to helping decarbonize industry with better technology. We offer candidates the opportunity to generate breakthrough results in Green/Clean Tech while immediately serving as a critical member of a growing and entrepreneurial team.
